TMA CS-V-01 Standard Reopens for Comments Nov. 1

Access and download standard for review and comment at www.tms.us/standards

October 29, 2019, McLean, Va. – The Monitoring Association [TMA] will reopen a review of the TMA CS-V-01 standard, Alarm Confirmation, Verification and Notification Procedures. This standard defines methods by which false notifications for signals received from security systems can be greatly reduced. It has been proven that confirming and verifying an alarm signal by a supervising station will drastically reduce false notifications. Alarm confirmation rises to its next level by defining multiple attempt confirmation, biometric, audio and video confirmation.

This 2016 TMA standard has been adopted by the various states and local units of government.

Recently reviewed and updated, the standard will re-open for public comment, Nov. 1. [Download a copy](#) for review and comment.

About The Monitoring Association

The Monitoring Association (TMA), formerly the Central Station Alarm Association (CSAA), is an internationally-recognized non-profit trade association that represents professional monitoring companies, security systems integrators, and providers of products and services to the industry. Incorporated in 1950, TMA is legally entitled to represent its members before Congress and regulatory agencies on the local, state and federal levels, and other authorities having jurisdiction (AHJs) over the industry.
