Alarm Industry Application for Verification of Industry Compliance

According to rules established by FirstNet – Built with AT&T, FirstNet eligibility is limited to those companies who meet accepted alarm industry standards that result in the transmission of public safety related alarms from systems designed primarily to protect life and/or property (e.g. robbery, burglary, unlawful intrusion, fire, emergency medical): to first responders to a Central Station Monitoring Facility that confirms and verifies the authenticity of the alarm and notifies a Public Safety Answering Point (PSAP) for relay to a public safety agency for the purpose of initiating an emergency response.

For an alarm services company to qualify to use the FirstNet network for alarm transport, it must first verify compliance through receipt of a Certificate of Verification from The Monitoring Association (TMA). The alarm services company can then seek approval for eligibility to operate on the FirstNet network by presenting the TMA Certificate of Verification to AT&T along with their contract(s) and/or service order(s), or to another alarm services company who will be providing FirstNet services from AT&T. Should a Company be found not to be in compliance, they will immediately no longer be permitted to connect to FirstNet.

The TMA Certificate of Verification will be renewed every 12 months based on when the initial TMA Compliance Certificate is issued.

Below is the matrix of Compliance and Responsibilities that are required to be obtained and maintained to remain in good standing.
